File 1950

Date: July 15, 2020

Code:

Subject: Camas Hand Crew Stream Restoration Part 1

To: Project Record

I have determined that Camas Hand Crew Stream Restoration Part 1 Project will implement an activity covered under the Umatilla National Forest Aquatic Restoration Environmental Assessment.

Details on project location and description are available in the project record checklist. The work is covered by project categories Large Wood, Boulder, and Gravel Placement; Off- and Side-Channel Habitat Restoration; Streambank Restoration; Beaver Habitat Restoration; and Fisheries, Hydrology, Geomorphology, Wildlife, Botany, and Cultural Surveys in Support of Aquatic Restoration and has been found to be consistent with the Forest Plan, General Aquatic Conservation Measures and Project Design Criteria for ARBO II, and Additional Project Design Criteria as outlined in the EA.

U.S. Fish and Wildlife Service (USFWS) and National Marine Fisheries Service (NMFS) as appropriate, have been notified in advance of activity implementation. Botanical surveys and cultural clearances have been completed. During Tribal Program of Work consultation, CTUIR identified specific concerns about aspects of documenting an isolated flake found in the project area. There were no changes identified for the project. Cultural resources specialists at the district, forest and tribal office are coordinating to resolve those issues for documentation.

A handwritten signature in blue ink, reading "Paula Guenther".
